computer languages

VOLUME CONTENTS

Volume 25, No. 1 **April 1999**

A. C. Reeves and C. Rattray 1 A sketch-based technique for the derivation of self-interpreters

M. A. Bassiouni and M. Llewellyn 39 Extending temporal query languages to handle imprecise time intervals

Volume 25, No. 2 **July 1999**

Ravi K. Gedela, Sol M. Shatz and Haiping Xu 55 Compositional Petri net models of advanced tasking in Ada-95

W. F. Wong 89 Optimizing floating point operations in Scheme

113 New books section

Volume 25, No. 3 **October 1999**

Jimmy H. M. Lee and Ho-fung Leung 119 An execution scheme for interactive problem-solving in concurrent constraint logic programming languages

Wuu Yang 145 A finest partitioning algorithm for attribute grammars

Kasper Østerbye and Wolfgang Kreutzer 165 Synchronization abstraction in the BETA programming language

Volume 25, No. 4 **December 1999**

Krishnaprasad Thirunarayan, Günter Kniesel and Haripriyan Hampapuram 189 Simulating multiple inheritance and generics in Java

Antonio Brogi, Chiara Renso and Franco Turini 211 Dynamic composition of parameterised logic modules
